

# AI and Image Analysis

# Rule Based Programing vs AI

## Algorithm

- 4 Sides
- Closed
- Perpendicular
- Equal Sides

# AI, Machine Learning and Deep learning

# Definitions

**Artificial intelligence leverages computers** and machines to mimic the problem-solving and decision-making capabilities of the human mind

**Machine Learning** : Algorithms that provide solutions to scenarios that it has not seen in advance, but can predict after seeing data in the form of paired inputs and outputs.

**Deep Learning** concerned with algorithms inspired by the structure and function of the brain called **artificial neural networks**. While traditional machine learning algorithms are linear, deep learning algorithms are stacked in a hierarchy of increasing complexity ( layers) where each layer uses output from the previous layer as input.

# Different Learning Strategies

- **Supervised machine learning algorithms** Training using labeled examples to predict future events and comparing it to intended output to modify the model up to the desired accuracy.
- **Unsupervised**
- **Semi-supervised**

# Generating Ground Truth : Training, Validating and Testing Data

# Machine Learning challenges

- Massive amounts of training data
- Subjectivity of data labeling and ground trothing
- Hidden layers data
- Training data bias
- May not be scalable : A solution may not be applicable for multiple intended uses

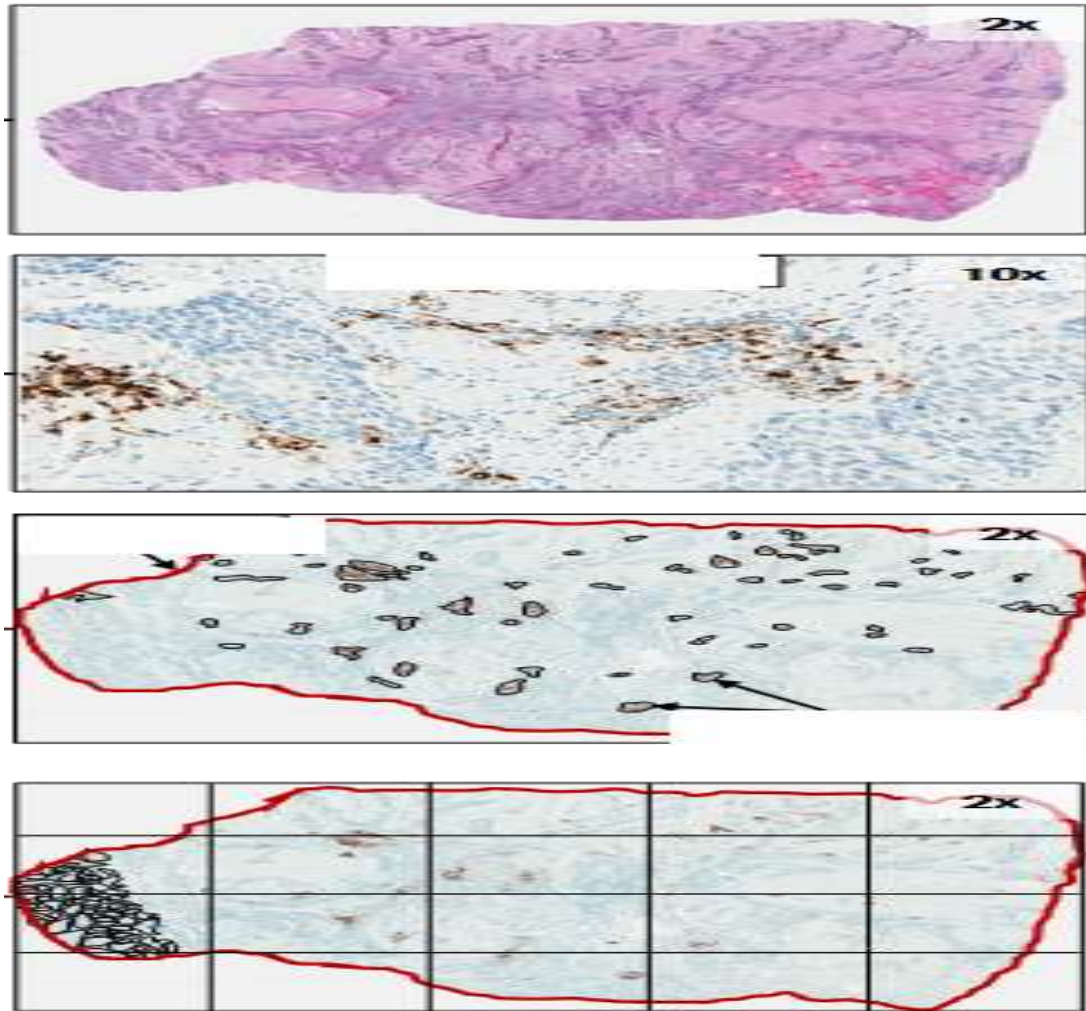

## ***Sources of variability of AI development in pathology***

- Preamanalytical sample handling/prep
- reagents, staining protocol
- scanner choice
- result interpretation

# AI Applications for the pathologist

- Small tumor deposits in lymph nodes
- Cancer Grading
- Quantification ( e.g Mitosis)
- Primary diagnosis and Secondary consult e.g. Tumor sign out
- Image analysis applications ( PDL1, Her2 ish etc.)
- Text feature extraction
- Text Interpretation of reports
- Coding Error prevention

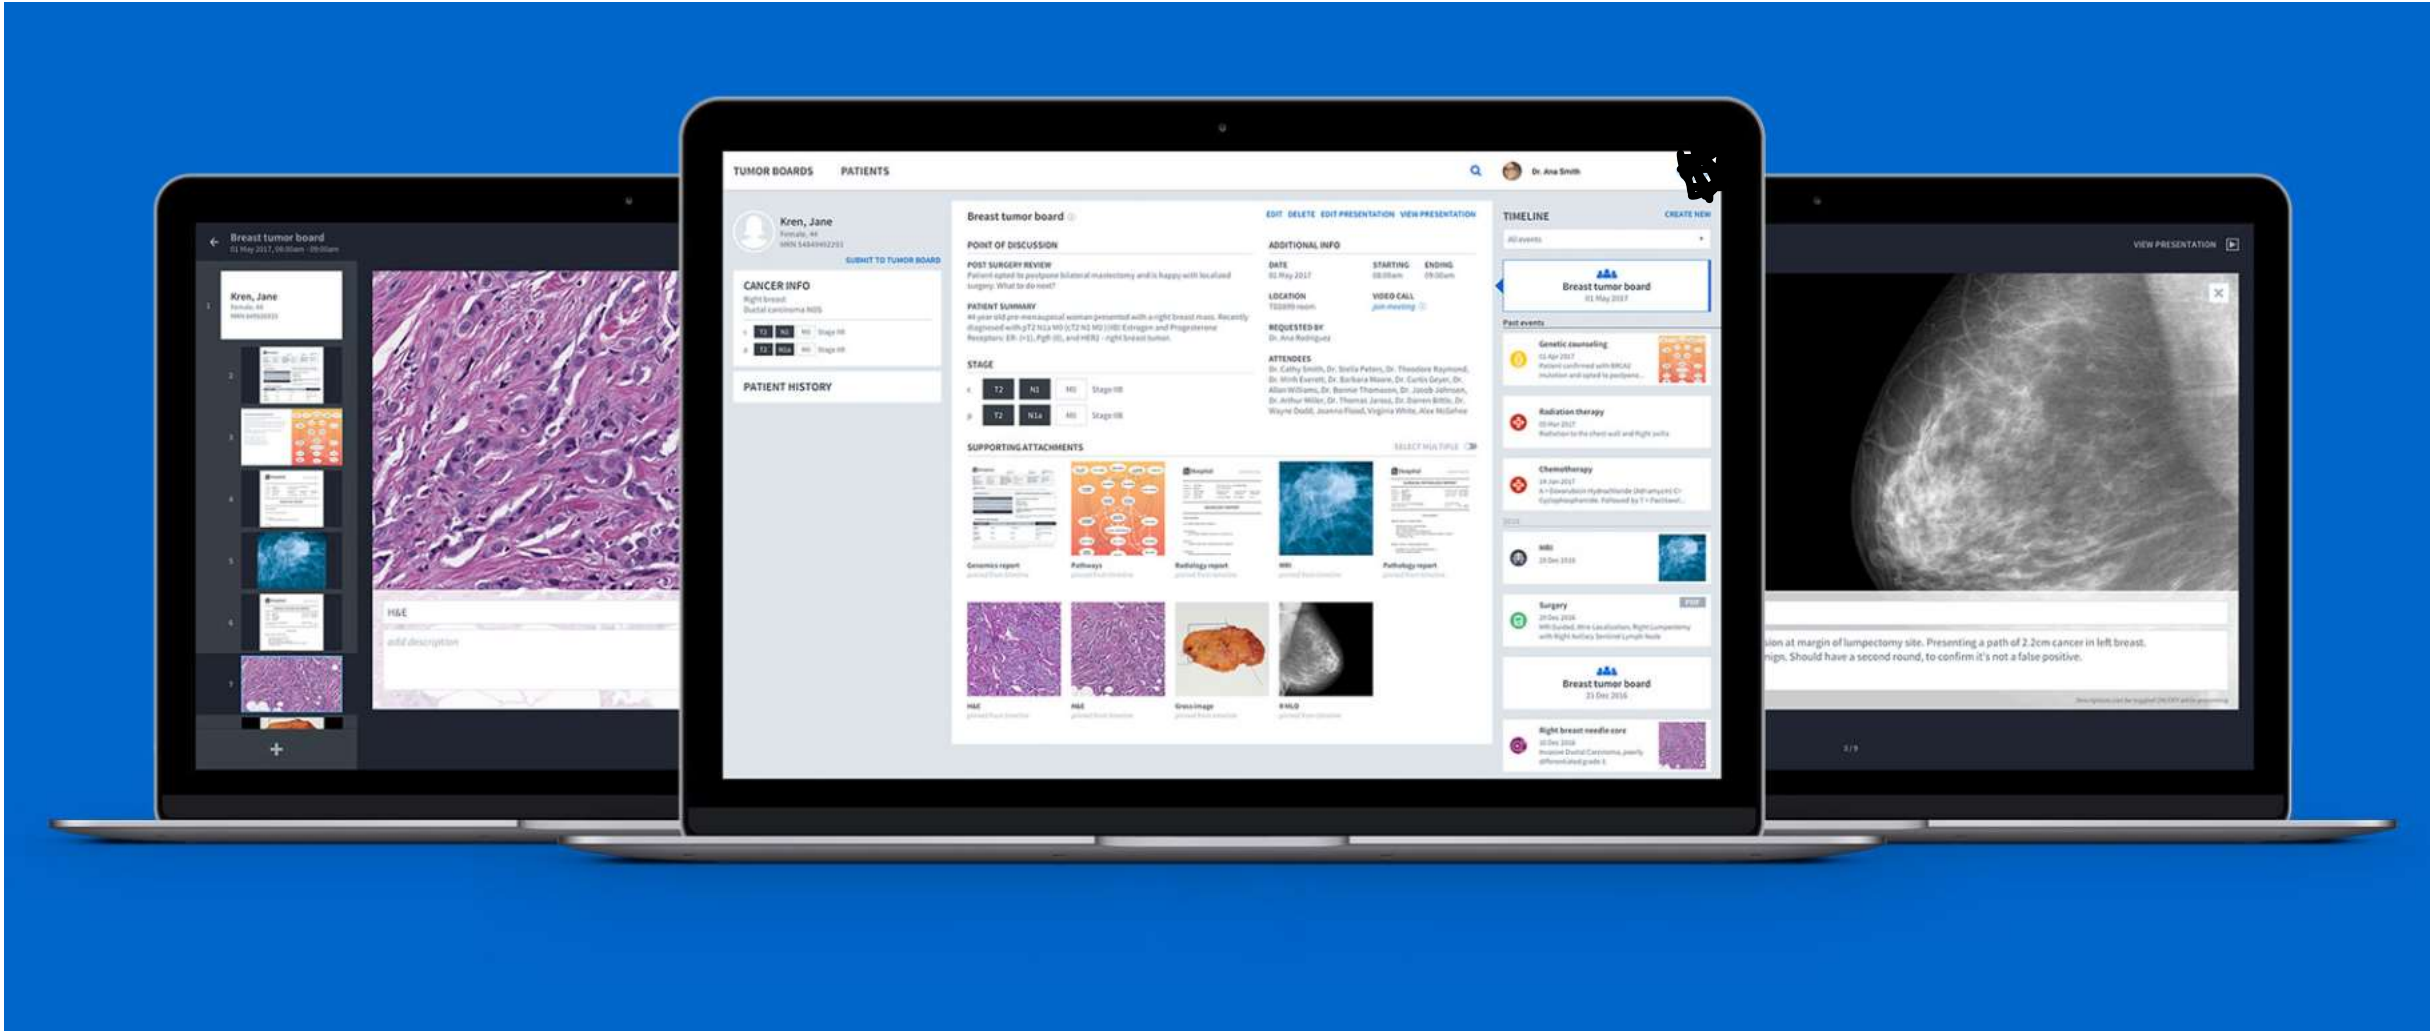

# Manual Vs AI Scoring

# Clinical Decision Support Platforms

## Software Tools to Organize Diagnostic Data and Present It

# Data-rich precision care of the future
